UCIMU Academy founded: creating skills that serve the machine tool industry

Pubblicato: Sabato 12 Dicembre 2020

Companies, especially those that produce machine tools, are always looking for **specialised staff**, especially those who have the latest new skills in the digital field. The **UCIMU** (the Association of Italian **machine tool** manufacturers) has founded an academy that promotes and supports the training of people involved in production in this sector.

This decision was taken with the support of the **UCIMU Foundation**, with the knowledge that training and updating the personnel employed in companies is a key factor in competitiveness, especially in a sector with a high technical-technological content, like that of production systems.

In Italy, companies in the machine tool sector have great difficulty in finding trained personnel to work with the latest technology. **The UCIMU Academy** has been founded with the aim of reducing this problem. It is the first step in the development of an organic plan that will allow the sector **to be able to count on people with skills** that satisfy the needs of companies and of their customers.

The first step of the project, which has the strong support of the new Chairwoman of the UCIMU Foundation, **Barbara Colombo**, of Varese, will be managed by the Foundation's Study and Business Culture Centre, in collaboration with **Energheia Impresa Sociale Srl**, a company that has been working in the field of youth training for years.

UNIVA, the Union of Industrialists of Varese Province, recently announced the creation of a **Business Academy**, a school with in-person attendance, to create new skills in companies.
